

Definition of Done

1. **Code Complete**

All functions have been implemented, and the code is refactored on this basis to make it easier to maintain and better support the future change in the next sprint.

2. **No error in coding standards**

The code is executed without any bugs.

3. **Acceptance criteria met**

Acceptance Tests demonstrating both positive and negative testing, Acceptance tests appropriately constructed from User Stories, evidence of regular testing properly documented.

4. **Unit test written**

Unit tests all designed for the features and written with significant coverage.

5. **Environments are prepared for release**

All development environments satisfies development needs.

6. **Documentation completed**

The documents, frequent stand-up meetings with action items, Sprint planning doc for each sprint, Sprint review doc for each sprint and Sprint retro doc for each sprint all completed

7. **Peer code review performed**

Before push the code to GitHub, the group number need to pull requests, after peer review then the code can push into the branch.

8. **Integration testing passed**

All Integration testing passed.

9. **The code merge into master**

All branch codes in GitHub are merged into master.
